Re: Letter of recommendation

It has been my pleasure to know and work with John Zanette since the summer of 1994. As you may know, John began his career with the University Hospital during the summer of 1990 serving in the roll of Network Manager for Computer Services. He was later promoted to Assistant Director of Computing Services.

John came to the University at a very oportune time in that in the early 90s the Hospital was beginning the development of their network infrastructure. John is a tireless and dedicated engineer who has been involved in every step of this process. His efforts have contributed to a reliable and robust system responsible for the delivery and management of business, critical care and research information. As a result of his and the departments accomplishments, I have developed a deep respect for his organizational and technical skills.

I believe that John Zanette would be significant asset to any enterprise be it public or private. I would strongly recommend his employment.
